

# netzeromatch™

NetZeroMatch™ is 100% renewable sourced energy matched with the mandatory LGCs with the remaining in International Renewable Energy Certificates (I-RECs)\*.

## RENEWABLE FUTURE

At Snowy Hydro, we have lived, breathed and delivered renewable energy to Australians through the mighty Snowy Scheme for generations. We are committed to continuing this legacy and leading the charge to a renewable energy future.

LEADERS IN  
RENEWABLE  
ENERGY

## WHAT WE OFFER

### 100% renewable sourced energy

100% renewable energy from the mighty Snowy.

### LGCs

Allocation of Large-scale Generation Certificates (LGCs) as per the Large-scale Renewable Energy Target (LRET).

### I-RECs

The remaining load is matched by International Renewable Energy Certificates (I-RECs) from the Snowy Scheme.

## CERTIFIED RENEWABLE ENERGY PRODUCT

NetZeroMatch™ is 100% renewable energy matched with the mandatory LGCs\* with the remaining in International Renewable Energy Certificates (I-RECs).

## 1:1 MATCHING

100% renewably sourced energy product with a 1:1 matching promise of one certificate surrendered per MWh consumption. All consumption is matched by LGCs\* under the Large-scale Renewable Energy Target (LRET) obligations, and I-RECs match the remainder.

## WHAT IS AN LGC?

Large-scale Generation Certificates (LGCs) are created by accredited renewable energy power stations, like wind, solar and hydro. One LGC is created per megawatt-hour (MWh) of renewable electricity generated. The Clean Energy Regulator (CER) administers the Renewable Energy Target, including the Large-scale Renewable Energy Target Scheme.

“Liable entities must surrender to the CER the required number of LGCs to meet their annual liability (as determined by the Renewable Power Percentage (RPP)).”
