

# TrueGreen™

To cater to the growing sustainability demand, we have created a premium renewable product, Snowy TrueGreen™. This provides an alternative to the existing GreenPower scheme, providing 100% renewable sourced energy and matched LGCs.

## Renewable Future

At Snowy Hydro, we have lived, breathed and delivered renewable energy to Australians through the mighty Snowy Scheme for generations. We are committed to continuing this legacy and leading the charge to a renewable energy future.

LEADERS IN  
RENEWABLE  
ENERGY

## WHAT WE OFFER

### 100% renewable sourced energy

100% renewable energy from our portfolio of wind, solar and our Hydro Electric Scheme.

### LGCs

100% allocation of Large-scale Generation Certificates (LGCs).

### Climate Active Certification

This product is certified Climate Active Carbon Neutral. *“The Climate Active initiative and Climate Active Carbon Neutral Standard supports and guides businesses as they account for and reduce carbon emissions. The Climate Active stamp helps the community take action by making it easier to identify and choose brands that are making a real difference.”*

## What is Climate Active?

*"Climate Active is an ongoing partnership between the Australian Government and Australian businesses to drive voluntary climate action. The brand represents Australia's collective effort to measure, reduce, and offset carbon emissions to lessen our negative impact on the environment.*

*The Climate Active stamp helps the community take action by making it easier to identify and choose brands that are making a real difference.*

*The Climate Active carbon neutral certification is one of the most rigorous in the world."*

## What is an LGC?

Large-scale Generation Certificates (LGCs) are created by accredited renewable energy power stations, like wind, solar and hydro. One LGC is created per megawatt-hour (MWh) of renewable electricity generated. The Clean Energy Regulator (CER) administers the Renewable Energy Target, including the Large-scale Renewable Energy Target Scheme.

*"Liable entities must surrender to the CER the required number of LGCs to meet their annual liability (as determined by the Renewable Power Percentage (RPP))."*\*\*
